### Certificates

---

#### [Meta Front-End Developer](#)

Online Course – [coursera.org](https://www.coursera.org)

### Projects

---

#### [My Pet Care](#) – Front End Developer

January 2025 – Current

- Outlined user requirements through creation of various user stories that helped define technical and user interface requirements
- Blueprinted UI wireframes in Figma designing **8** web pages, **6** different web components, and edited image assets in Gimp to better suit design styles and backgrounds
- Launched a React TypeScript web application following Figma designs to Github pages that is viewable on desktop and mobile devices

#### [Meta Front End Developer Project](#) – Front End Developer

May 2023 – July 2023

- Developed a React web application for the Little Lemon Restaurant following the designs of created wireframes and Figma design files resulting in the creation of **17** different components
- Implemented input validation libraries to manage customer input in reservation forms by catching, highlighting, and offering solutions to errors within each input resulting in forms being error free upon submission
- Integrated an API data source which fetches time periods based on a selected date dynamically producing a dropdown list containing a selection of available reservation times

#### [Freelance Front End Developer](#) – Front End Developer

June 2022 - September 2022

- Proactively met with client to present brand aligned webpage mockups using Figma and addressed client requests leading to a highly satisfied customer post launch
- Created a responsive webpage using HTML, CSS, and JavaScript then deployed the final product to Vercel
- Informed company representative on website development updates and promptly addressed requests by client through structured demo sessions

#### [FarmSignal](#) – Front End Developer

August 2020 – May 2021

- Implemented **3** User Interface components using React and Material-UI framework
- Collaborated within a team of **6** teammates, followed SCRUM methodology during daily meetings and delegated tasks in Jira based on priority
- Participated in team pull request reviews using GitHub to review code standard and ensure working codebase

#### [Omviser](#) – Front End Developer Intern

June 2020 – September 2020

- Produced web components following mockup directions and specifications given by a UI designer and constructed them using mustache templates and Bootstrap
- Generated a mentor search page containing mentor information and a star review system assembled using Bootstrap and custom CSS resulting in a responsive mentor information page with **8** subcategories
- Partnered with **1** Back End member to ensure mentor API worked correctly and used to dynamically fill search page with mentor profiles

### Affiliations

---

#### [Society of Hispanic Professional Engineers](#), Northridge, CA - Chair of Technology

June 2019 – May 2021

- Organized a beginners website building workshop consisting of **15** participants and culminated in each participant creating their own personal webpage hosted on glitch.com

### Education

---

California State University, Northridge, Bachelor of Science in Computer Science

2021
